For use in vacuum environments, the vacuum compatible stage series offers replacement with a stainless steel or machined aluminum body as well as replacement with vacuum grease, and uses a vacuum rated motor and a contact type or mechanical driven type switch, and Teflon coated cables for signal wires.

The series is suited for positioning in environments where the degree of vacuum is between 10^{-4} and 10^{-5} Pa. For the vacuum characteristics, see the measurement data of outgas volume, degree of vacuum, and mass component ratio.

- In addition to the standard lineup, motor replacement, sensor replacement, special specifications such as vacuum compatible large mirror holders, and replacement of grease to vacuum grease for the guides or feed screws of standard specification stages to deal with low vacuum specifications are available. Contact our International Sales Division for more information.

Vacuum Compatible 5 Phase Stepping Motor

The $\square 24$ mm minimum size and lightest type motor saves space.

Compact Body

Machined Aluminum and use of a crossed roller for the linear guide achieved the thin body.

Rotation Table
The body is made of aluminum machining.

Limit Sensor
The high-vacuum compatible limit switch enables origin detection with high repeatability inside a vacuum chamber.
* Only for VSGSP-120YAW

[Attention] To use a vacuum compatible stage in a vacuum chamber, the connection cables between the vacuum side and the atmosphere side need to be relayed using a vacuum current feedthrough or the like. Prepare the feedthrough according to the vacuum chamber specifications.

Guide

- ▶ Because heat dissipation generally deteriorates in vacuum, specification temperature conditions are stricter than those for atmosphere. Check the usage conditions such as stage operation to make sure that the motor case temperature does not exceed 80°C.

●Emitted amount of gas

Part Number	Emitted Amount of Gas Q (after 40 minutes of emission)	
	(Torr·ℓ/s/unit)	(Pa·ℓ/s/unit)
VSGSP26-200	4.77×10^{-4}	6.36×10^{-2}

Evaluation and Device Specifications

Exhaust system: Turbo-Molecular Pump STP-301
 Seiyu Instruments Inc. (Now Edwards Japan Limited)
 Pumping speed: 300ℓ/sec
 Mass spectroscope: Quad Mass Spectrometer QME200
 Pfeiffer Vacuum
 Mass range: 1 – 200amu

Emitted amount of gas is found by the following equation:

$$Q = \frac{(P - P') \times V}{t \times N}$$

P : Vacuum immediately after seal off
 P' : Vacuum after seal-off time has elapsed
 N : Number of stage units (1unit)
 V : Vacuum chamber volume (ℓ)
 t : Seal-off time (600s)

From the measurement results of gas volume discharged from a vacuum compatible motorized stage

The main components of outgas are water and nitrogen. This is because the gas was caused by residual air on the stage surface, and grease used for drive components is considered to have little impact on the amount of gas.

Vacuum Compatible Rotation Motorized Stage | VSGSP-YAW

Rotation motorized stages for vacuum environment.

The $\phi 60\text{mm}$ compact type is space saving, and best suited for experiments and use in chambers of inspection equipment.

The $\phi 120\text{mm}$ type is equipped with a limit sensor compatible with vacuum environments. It is thin but has high load capacity because of its $\square 42\text{mm}$ large motor.

Guide

- ▶ Motor cables and sensor cables are 1m bare wires.

Guide

- ▶ Rotation Range

- ▶ Homing of rotation motorized stages is performed using the CW limit sensor as the origin sensor.
- ▶ Origin detection is adjusted so that the stage stops at 0 degrees when homing is performed in the MINI system at half step.
