High performance in a small footprint

The EmStat4X is a small battery and USB-powered Potentiostat, Galvanostat, and optional Frequency Response Analyser (FRA) for Electrochemical Impedance Spectroscopy (EIS).

The EmStat4X Low Range (LR) version is great for applications that require measuring low currents down to picoamps, like (bio)sensor research.

The High Range (HR) version is very suitable for applications that need a maximum current of up to 200 mA.

The EmStat4X LR and HR features include:

- Fast EIS support: for running fixed-frequency EIS measurements at a very low interval of around 1 ms.
- Auxiliary Port: for connecting to a MUX8-R2 multiplexer, temperature sensor, pH sensor, stirrer control, triggering and more.
- iR compensation: to compensate for the iR drop between the Reference electrode and the outside of the double layer of the electrochemical cell.
- Bluetooth: for a wireless connection to a PC, smartphone or tablet.
- 11.1 Wh battery: for more than 8 hours of measurements (with the LR).
- Small borderless display: showing the state of the battery and connectivity.

Always a backup

The EmStat4X is equipped with 500 MB internal storage memory. This means all your measurements can be saved on-board as a backup. All internally stored measurements can be browsed and transferred back to the PC easily using PSTrace.

Your data is always with your instrument wherever you take it.

Key specifications		
model	Low Range (LR)	High Range (HR)
potential range	±3 V	±6 V
- max. compliance voltage	±5 V	±8 V
- current ranges	1 nA to 10 mA (8 ranges)	100 nA to 100 mA (7 ranges)
• max. current	±30 mA	±200 mA
• FRA/EIS (optional)	10 μHz to 200 kHz	
electrode connections	WE, RE, CE, and ground, with 2 mm banana plugs And SPE connector	WE, RE, CE, S, and ground, with 2 mm banana plugs

See page 7 for all specifications.

Supported Techniques

The EmStat4X supports the following electrochemical techniques when used with PSTrace.

Voltammetric techniques

•	Linear Sweep Voltammetry	LSV
•	Cyclic Voltammetry	CV
•	Fast Cyclic Voltammetry	FCV
•	AC Voltammetry	ACV

Pulsed techniques

•	Differential Pulse Voltammetry	DPV
•	Square Wave Voltammetry	SWV
	Normal Pulse Voltammetry	NPV

These methods can all be used in their stripping modes which are applied for (ultra-) trace analysis.

Amperometric techniques

•	Chronoamperometry	CA
•	Zero Resistance Amperometry	ZRA
•	Chronocoulometry	CC
•	MultiStep Amperometry	MA
•	Fast Amperometry	FAM
•	Pulsed Amperometric Detection	PAD

Galvanostatic techniques

•	Linear Sweep Potentiometry	LSP
•	Chronopotentiometry	CP
•	MultiStep Potentiometry	MP
•	Open Circuit Potentiometry	OCP

Other

•	Mixed Mode	MM

EmStat4X LR EIS Accuracy Contour Plot

EmStat4X HR EIS Accuracy Contour Plot

Note

The accuracy contour plots were determined with an ac-amplitude of ≤10 mV rms for all limits, except for the high impedance limit, which was determined using an ac-amplitude of 250 mV. The standard 1 meter cell cables were used. Please note that the true limits of an impedance measurement are influenced by all components in the system, e.g. connections, the environment, and the cell.

Standard EmStat4X Kit

A standard EmStat4X kit includes a rugged carrying case with:

- EmStat4X LR or HR
- USB-C USB-C cable
- USB-C to USB-A adapter
- 1 meter cell cable with 2 mm banana pins
- 4 or 5 croc clips
- Dummy Cell

Also included:

- PSTrace software for Windows (on USB drive)
- Manual (hardcopy)
- Quick Start document
- Calibration Report

EmStat4X standard kit

EmStat4X Accessories

MUX8-R2 or MUX16 multiplexer

The MUX8-R2 is an 8-channel multiplexer. It allows the EmStat4X to measure up to 8 cells, switching RE, CE, WE1 and WE2 or Sense.

In 8-WE mode it can measure up to eight working electrodes on sensor arrays with shared reference and counter electrodes as well. The MUX8-R2 is stackable up to 128 channels.

Attention: The MUX8-R2 max. current with the EmStat4X HR is 70 mA.

Magnetic stirrer with Switchbox

The magnetic stirrer controlled by the instrument is ideal for stripping analysis applications. The stirrer is switched on during the conditioning and deposition stages by means of the Switchbox.

LM35/TMP36 temperature sensor

This temperature sensor allows for monitoring of temperature during an experiment.

Two point calibration allows the user to precisely calibrate the sensor for the required temperature range. The calibration curve shows a linear slope of +10 mV/°C with 0.5°C Ensured Accuracy (at 25°C). It is rated for full 2°C to 150°C range (LM35) or -40°C to 125°C range (TMP36). The sensor has low self-heating (0.08°C in still air)

Differential Electrometer Amplifier (DEA)

The Differential Electrometer Amplifier (DEA) is a high impedance input amplifier. It can be used as a floating voltage amplifier with differential input and single output to the auxiliary port of the potentiostats.

Default range is -10V to 10V (1x gain). Possible gains are: 2x, 5x, 10x, 20x, 50x and 100x.

PSTrace: Software for Windows

PSTrace is designed to get the most out of your instrument right after installation, without going through a long learning period. It has three modes; the Scientific mode which allows you to run all the techniques our instruments have to offer, and two dedicated modes for Corrosion analysis and the Analytical Mode. The Analytical Mode is designed for use with (bio)sensors and allows you to do concentration determinations. Extensive help files and prompts guide the user through a typical analysis.

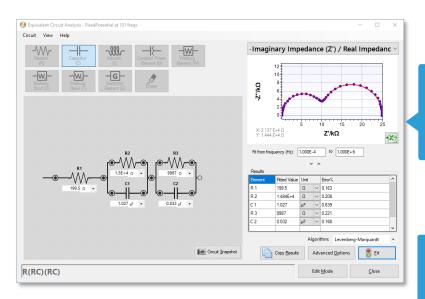

Scripting

The intuitive script editor allows for easily creating a sequence of measurements or other tasks, by means of dragging and dropping actions in a list.

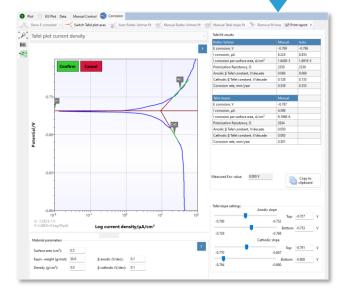

Use the graphical editor to draw the equivalent circuit or enter the CDC directly.

Corrosion mode for Tafel plot analysis and other corrosion data analysis.

Other functions in PSTrace

- Concentration determination
- Advanced peak search algorithms
- Open your data in Origin and Excel with one click of a button
- Save all available curves, measurement data and methods to a single file
- Load measurements from the internal storage
- Direct validation of method parameters
- Run custom MethodSCRIPT™

Integration with third party software

- Excel
- Origin
- Matlab
- ZView

Minimum System Requirements

- Windows 7 or later
- 1 GHz or faster 32-bit (x86) or 64-bit (x64) processor
- 2 GB RAM (32-bit) or 4 GB RAM (64-bit)
- Screen resolution of 1366 × 768 pixels

EmStat4X works with MethodSCRIPT™

The MethodSCRIPT™ scripting language is designed to integrate our instruments and potentiostat (modules) effortlessly in your hardware setup, product, or experiment.

MethodSCRIPT[™] gives you full control over your potentiostat. The simple script language is parsed on-board the instrument and allows for running all supported electrochemical techniques, making it easy to combine different measurements and other tasks.

MethodSCRIPT can be generated, edited, and executed in PSTrace.

MethodSCRIPT features include:

- Use of variables
- (Nested) loops and conditional logic support
- User code during a measurement iteration
- Exact timing control
- Simple math operations on variables (add, sub, mul, div)
- Digital I/O, for example for waiting for an external trigger
- Logging results to internal storage or external SD card
- Reading auxiliary values like pH or temperature
- and many more..

Software Development Kits for .NET

Develop your own application in no time for use with any of our instruments or potentiostat module. Our SDKs are free of charge.

There are three PalmSens Software Development Kits (SDKs) for .NET. Each SDK can be used with any of our instruments or OEM potentiostat modules to develop your own software. The SDK's come with a set of examples that shows how to use the libraries. PalmSens SDKs with examples are available for the following .NET Frameworks:

- WinForms
- Xamarin (Android)
- WPF

Each SDK comes with code examples for:

- Connecting
- Running measurements and plotting data
- Manual control of the cell
- Accessing and processing measured data
- Analyzing and manipulating data
- Peak detection
- Equivalent Circuit Fitting on impedance data
- Saving and loading files

PStouch: App for Android

PStouch is an app for Android devices compatible with all PalmSens, EmStat and Sensit potentiostats.

PStouch features:

- Setting up and running measurements
- Loading and saving measured curves
- Analysing and manipulating peaks
- Sharing measurement data directly via any service like email or Dropbox
- Concentration determination by means of Standard Addition or Calibration Curve
- Support for PalmSens accessories such as a Multiplexer or Stirrer
- All method and curve files are fully compatible with PSTrace software for Windows.
